This is your **NEW** Battery Warranty and Pro Rata Adjustment Policy

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE

ORIGINAL EQUIPMENT BATTERIES

Original equipment batteries are covered by the American Motors Dealer Warranty as outlined on Page D-2 of the "Warranty and Policy Procedures." Rambler Powr-Guard 24 Batteries that are used to replace original equipment batteries are warranted for the unexpired portion of the warranty period of the vehicle or for 90 days, whichever is greater.

Thereafter, such batteries are eligible for pro rata adjustment for the remaining "adjusted months of service." (See pro rata adjustment tables below).

Original equipment batteries installed at the factory which fail **after** the first 24 months or 24,000 miles of service will be replaced on a pro rata basis. The pro rata adjustment period is 36 months from date of delivery of the vehicle to the original

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE—Continued

purchaser. Adjustments should be based on actual time from delivery date—not mileage. Refer to the battery pro rata adjustment tables below.

SERVICE BATTERIES

Rambler Powr-Guard 24 Batteries (sold on a repair order or over the parts counter) are covered by the "American Motors Dealer Parts and Accessories Warranty" as outlined on Page D-3 of the "Warranty and Policy Procedures."

Service Batteries are warranted for 90 days without mileage limitation. After 90 days, and within the battery adjustment period, a defective service replacement battery can be replaced with a new battery on a pro rata basis. Adjustments should be based on actual time in service—not mileage. Refer to the battery pro rata adjustment tables below.

BATTERY PRO RATA ADJUSTMENT

Batteries that are beyond the applicable warranty period but are within the adjustable service period and are found to be defective, not merely discharged, are handled in the following manner:

1. Install a new Rambler Powr-Guard 24 Battery.
2. Determine the number of months the battery has been in service.
3. From the "Pro Rata Adjustment Tables" determine the owners adjusted cost for the new battery.
4. From the "Pro Rata Adjustment Tables" determine the dealer cost.
5. Prepare a Request for Credit listing total dealer credit under column heading, "Total Parts Credit."

The Battery Pro Rata Adjustment Table shows the part number, S.A.E. dimensional group size, suggested list price, dealer net price, months of battery pro rata adjustment period, owner cost per month and dealer cost per month. The "cost per month" figures are to be used in calculating battery pro rata adjustment amounts for Rambler brand batteries.

The suggested charge to the customer is determined by multiplying the "owner cost per month" by the number of months the battery was in service. The pro rata dealer credit is determined by multiplying the "dealer cost per month"

by the number of months of service and subtracting the result from the battery dealer net price.

The following example shows how to compute the suggested credit and charge to the owner and the pro rata dealer credit for a defective 8991114 Battery—50 A.H. (36 months battery) which has been in normal service for 25 months.

Suggested Credit to Owner

Suggested List Price.....	\$31.95
Suggested owner cost for a new battery (\$.89 owner cost per month times 25 months).....	\$22.25
Credit to owner on a new battery.....	\$ 9.70

Dealer Credit

Dealer Net Price (Includes Electrolyte).....	\$21.85
Dealer cost for a new battery (\$.61 per month times 25 months).....	\$15.25

Total dealer credit to be claimed on "Request for Credit" form under column heading "Total Parts Credit".... \$ 6.60

Summary of Transaction

Dealer receives gross profit as follows:	
From owner.....	\$.40
From Request for Credit.....	\$ 6.60
From sale of old battery as scrap.....	\$.95
Total Gross Profit.....	\$ 7.95

Dealer net prices as shown in the current Accessory Price List plus \$1.00 to cover Electrolyte used to activate batteries are to be used for all pro rata adjustments. The dealer net prices shown in the adjustment table include the \$1.00. Suggested list prices also include Electrolyte.

When preparing Request for Credit forms for **pro rata** battery adjustments **do not** add a 20% parts credit.

Batteries replaced under **car or service warranties** are eligible for the 20% parts allowance on the request for credit. The scrap value of \$.95 per defective battery will be deducted from the "Total Parts Credit" shown on the request for credit.

Batteries replaced under car or service warranties or on pro rata adjustment are eligible for R. and R. time allowance of .2 hours.

S/D SELL DOWN PRICE

This is your Battery Warranty and Pro Rata Adjustment Policy

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE

ORIGINAL EQUIPMENT BATTERIES

Original equipment batteries are covered by the American Motors Dealer Warranty as outlined on Page D-2 of the "Warranty and Policy Procedures." Rambler Powr-Guard 24 Batteries that are used to replace original equipment batteries are warranted for the unexpired portion of the warranty period of the vehicle or for 90 days, whichever is greater.

Thereafter, such batteries are eligible for pro rata adjustment for the remaining "adjusted months of service." (See pro rata adjustment tables on page 18).

Original equipment batteries installed at the factory which fail **after** the first 24 months or 24,000 miles of service will be replaced on a pro rata basis. The pro rata adjustment period is 36 months from date of delivery of the vehicle to the original

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE—Continued

purchaser. Adjustments should be based on actual time from delivery date—not mileage. Refer to the battery pro rata adjustment tables below.

SERVICE BATTERIES

Rambler Powr-Guard 24 Batteries (sold on a repair order or over the parts counter) are covered by the "American Motors Dealer Parts and Accessories Warranty" as outlined on Page D-3 of the "Warranty and Policy Procedures."

Service Batteries are warranted for 90 days without mileage limitation. After 90 days, and within the battery adjustment period, a defective service replacement battery can be replaced with a new battery on a pro rata basis. Adjustments should be based on actual time in service—not mileage. Refer to the battery pro rata adjustment tables below.

BATTERY PRO RATA ADJUSTMENT

Batteries that are beyond the applicable warranty period but are within the adjustable service period and are found to be defective, not merely discharged, are handled in the following manner:

1. Install a new Rambler Powr-Guard 24 Battery.
2. Determine the number of months the battery has been in service.
3. From the "Pro Rata Adjustment Tables" determine the owners adjusted cost for the new battery.
4. From the "Pro Rata Adjustment Tables" determine the dealer cost.
5. Prepare a Request for Credit listing total dealer credit under column heading, "Total Parts Credit."

The Battery Pro Rata Adjustment Table shows the part number, S.A.E. dimensional group size, suggested list price, dealer net price, months of battery pro rata adjustment period, owner cost per month and dealer cost per month. The "cost per month" figures are to be used in calculating battery pro rata adjustment amounts for Rambler brand batteries.

The suggested charge to the customer is determined by multiplying the "owner cost per month" by the number of months the battery was in service. The pro rata dealer credit is determined by multiplying the "dealer cost per month"

by the number of months of service and subtracting the result from the battery dealer net price.

The following example shows how to compute the suggested credit and charge to the owner and the pro rata dealer credit for a defective 8991114 Battery—50 A.H. (36 months battery) which has been in normal service for 25 months.

Suggested Credit to Owner

Suggested List Price.....	\$31.95
Suggested owner cost for a new battery (\$.89 owner cost per month times 25 months).....	\$22.25
Credit to owner on a new battery.....	\$ 9.70

Dealer Credit

Dealer Net Price (Includes Electrolyte).....	\$21.85
Dealer cost for a new battery (\$.61 per month times 25 months).....	\$15.25

Total dealer credit to be claimed on "Request for Credit" form under column heading "Total Parts Credit".... \$ 6.60

Summary of Transaction

Dealer receives gross profit as follows:

From owner.....	\$.40
From Request for Credit.....	\$ 6.60
From sale of old battery as scrap.....	\$.95
Total Gross Profit.....	\$ 7.95

Dealer net prices as shown in the current Accessory Price List plus \$1.00 to cover Electrolyte used to activate batteries are to be used for all pro rata adjustments. The dealer net prices shown in the adjustment table include the \$1.00. Suggested list prices also include Electrolyte.

When preparing Request for Credit forms for **pro rata** battery adjustments **do not** add a 20% parts credit.

Batteries replaced under **car or service warranties** are eligible for the 20% parts allowance on the request for credit. The scrap value of \$.95 per defective battery will be deducted from the "Total Parts Credit" shown on the request for credit.

Batteries replaced under car or service warranties or on pro rata adjustment are eligible for R. and R. time allowance of .2 hours.

This is your Battery Warranty and Pro Rata Adjustment Policy

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE

ORIGINAL EQUIPMENT BATTERIES

Original equipment batteries are covered by the American Motors Dealer Warranty as outlined on Page D-2 of the "Warranty and Policy Procedures." Rambler Powr-Guard 24 Batteries that are used to replace original equipment batteries are warranted for the unexpired portion of the warranty period of the vehicle or for 90 days, whichever is greater.

Thereafter, such batteries are eligible for pro rata adjustment for the remaining "adjusted months of service." (See pro rata adjustment tables on page 19).

Original equipment batteries installed at the factory which fail **after** the first 24 months or 24,000 miles of service will be replaced on a pro rata basis. The pro rata adjustment period is 36 months from date of delivery of the vehicle to the original

RAMBLER POWR-GUARD 24 BATTERIES WARRANTY AND ADJUSTMENT PROCEDURE—Continued

purchaser. Adjustments should be based on actual time from delivery date—not mileage. Refer to the battery pro rata adjustment tables below.

SERVICE BATTERIES

Rambler Powr-Guard 24 Batteries (sold on a repair order or over the parts counter) are covered by the "American Motors Dealer Parts and Accessories Warranty" as outlined on Page D-3 of the "Warranty and Policy Procedures."

Service Batteries are warranted for 90 days without mileage limitation. After 90 days, and within the battery adjustment period, a defective service replacement battery can be replaced with a new battery on a pro rata basis. Adjustments should be based on actual time in service—not mileage. Refer to the battery pro rata adjustment tables below.

BATTERY PRO RATA ADJUSTMENT

Batteries that are beyond the applicable warranty period but are within the adjustable service period and are found to be defective, not merely discharged, are handled in the following manner:

1. Install a new Rambler Powr-Guard 24 Battery.
2. Determine the number of months the battery has been in service.
3. From the "Pro Rata Adjustment Tables" determine the owners adjusted cost for the new battery.
4. From the "Pro Rata Adjustment Tables" determine the dealer cost.
5. Prepare a Request for Credit listing total dealer credit under column heading, "Total Parts Credit."

The Battery Pro Rata Adjustment Table shows the part number, S.A.E. dimensional group size, suggested list price, dealer net price, months of battery pro rata adjustment period, owner cost per month and dealer cost per month. The "cost per month" figures are to be used in calculating battery pro rata adjustment amounts for Rambler brand batteries.

The suggested charge to the customer is determined by multiplying the "owner cost per month" by the number of months the battery was in service. The pro rata dealer credit is determined by multiplying the "dealer cost per month"

by the number of months of service and subtracting the result from the battery dealer net price.

The following example shows how to compute the suggested credit and charge to the owner and the pro rata dealer credit for a defective 8991355 Battery—50 A.H. (36 months battery) which has been in normal service for 25 months.

Suggested Credit to Owner		(A)	
Suggested List Price	\$32.95	\$32.30
Suggested owner cost for a new battery		
(\$.00 owner cost per month times		
25 months)	\$23.00	\$22.50
Credit to owner on a new battery	\$ 9.95	\$ 9.80
Dealer Credit			
Dealer Net Price (Including Electrolyte)	\$23.50	\$23.10
Dealer cost for a new battery		
(\$.00 per month times 25 months)	\$16.25	\$16.00
Total dealer credit to be claimed on		
"Request for Credit" form under		
column heading "Total Parts Credit"	\$ 7.25	\$ 7.10

Summary of Transaction

Dealer receives gross profit as follows:			
From owner	\$ (.50)	(\$.60)
From Request for Credit	\$ 7.25	\$ 7.10
From sale of old battery as scrap	\$.95	\$.95
Total Gross Profit	\$ 7.70	\$ 7.45

Dealer net prices as shown in the current Accessory Price List plus \$1.00 to cover Electrolyte used to activate batteries are to be used for all pro rata adjustments. The dealer net prices shown in the adjustment table include the \$1.00. Suggested list prices also include Electrolyte.

When preparing Request for Credit forms for **pro rata** battery adjustments **do not** add a 20% parts credit.

Batteries replaced under **car or service warranties** are eligible for the 20% parts allowance on the request for credit. The scrap value of \$.95 per defective battery will be deducted from the "Total Parts Credit" shown on the request for credit.

Batteries replaced under car or service warranties or on pro rata adjustment are eligible for R. and R. time allowance of .2 hours.
